BOTSWANA vs SOMALIA: A Tale of Two Nations

"***From Victims of History, to Authors of the Next Chapter***"

Theme: Fresh Perspectives. Stronger Bonds. Lasting Transformation.

09/03/2026

1. Historical Background, Context at Independence & Turning Points

BOTSWANA

At independence in 1966, Botswana as a country (then Bechuanaland) was one of the poorest countries in the world. It was landlocked, largely arid, had almost no paved roads, fewer than 20 university graduates, a per capita income of approximately USD 70, and was heavily dependent on British aid. The country had no known significant natural resources and was surrounded by apartheid South Africa and Rhodesia (Zimbabwe), making its geopolitical position precarious.

The Turning Point came swiftly and decisively:

1967 — Diamond discovery in Orapa. Rather than falling into the 'resource curse', Botswana as a country nationalized the mining sector through Debswana (a 50/50 partnership with De Beers) and channelled revenues into public goods — education, healthcare, roads and institutions.

1966–1980 — President Seretse Khama anchored governance in Botswana as a country's traditional concept of 'Botho' (dignity, respect, communal responsibility) and built strong institutions before the money arrived. He resisted patronage and insisted on transparency.

The SAPS Framework — Sustainable development, rapid economic growth, economic independence, and Botswana as a country as a democratic state, became the national compass.

"Better little progress than no progress." — What Botswana as a country showed is that consistency in governance over decades compounds into transformation.

SOMALIA

Somalia gained independence in 1960, with the unification of British Somaliland and the former Italian Trust Territory. At independence, it looked promising — a relatively homogenous culture and language (rare in Africa), a strategic coastline, and significant pastoral and agricultural potential.

The descent into fragility did not happen by accident — it was largely the result of leadership failures:

1969 — General Siad Barre overthrew the civilian government. The military junta dismantled political parties, promoted clan favoritism, and systematically weakened institutions.

1977–1978 — The disastrous Ogaden War with Ethiopia (funded by borrowed petrodollars) badly damaged the economy and military morale.

1991 — State collapse after Barre's ousting. No government managed to hold the country together. Clan militias fragmented the nation into warlord territories.

2006–present — The rise of Al-Shabaab stepped into the governance vacuum with extremism, further making state rebuilding extremely difficult.

"Institutions of governance don't fall in a day." They erode gradually — through bad leadership decisions, unchecked nepotism, and the weaponization of identity politics.

2. Key Sectors that Drove National Transformation

BOTSWANA

Botswana as a country's transformation did not happen by accident — it was carefully planned across key sectors:

Mining & Resource Revenue Management: The Debswana partnership model ensured national revenues flowed into sovereign wealth (the Pula Fund). By the 1990s, Botswana as a country was one of the fastest-growing economies globally. Diamonds still account for ~70-80% of export earnings.

Education: From fewer than 20 university graduates at independence, Botswana as a country invested aggressively in human capital. The University of Botswana as a country was established in 1982. Literacy rates rose from under 40% to over 87% today.

Governance & Anti-Corruption: The Directorate on Corruption and Economic Crime (DCEC) established in 1994 is still seen as a model of institutional independence on the continent. Botswana as a country continues to rank as the least corrupt country in sub-Saharan Africa.

Healthcare: Botswana as a country became one of the first African countries to offer free ARV treatment to HIV/AIDS patients (a country with one of the world's highest HIV prevalence rates). The MASA programme turned a crisis into a public policy success story.

Diversification -Tourism, Financial Services: The Okavango Delta (UNESCO World Heritage Site) drives high-value, low-volume ecotourism. Financial services and the diamond-cutting industry add value domestically.

SOMALIA

Somalia's tragedy is the story of sectors that looked promising being slowly dismantled:

Agriculture & Livestock: Somalia is historically one of the world's largest exporters of live camels and livestock. Barre's collectivization policies destroyed pastoral systems. By the 1990s, famine followed conflict.

Fisheries: Somalia has one of Africa's longest coastlines (3,300 km). Foreign illegal fishing in Somali waters during the state collapse period drove desperate coastal communities toward piracy as their only economic option.

Remittances (a resilience sector): In the absence of formal banking, the Hawala remittance system became Somalia's de facto financial sector, transferring over USD 1.3 billion annually — more than all aid and FDI combined.

Telecom (an unexpected success): Paradoxically, Somalia developed one of Africa's cheapest and most advanced mobile phone networks in the 2000s largely because there was no regulatory state to protect incumbents. Hormuud Telecom emerged as a private sector success in a stateless environment.

3. Critical Actors and Their Specific Roles

Actor	Country	Role & Impact
President Seretse Khama	Botswana	Founding father who prioritized institutional integrity over personal enrichment. Died in office without personal wealth accumulation. Set the governance standard.
Quett Masire	Botswana	Succeeded Khama and continued the economic diversification agenda. Grew the Pula Fund and managed diamond revenues with discipline.
Festus Mogae	Botswana	Led the HIV/AIDS response. Declared the epidemic a national emergency and accessed international funding for free ARV treatment — credited with saving hundreds of thousands of lives.
De Beers (Private Sector)	Botswana	Co-created Debswana model. Brought technical expertise while Botswana retained ownership stakes and revenue rights — a model of equitable partnership.

General Siad Barre	Somalia	Military ruler who dismantled institutions, promoted clan warfare, borrowed recklessly, and left a political vacuum that consumed the nation for decades.
Al-Shabaab	Somalia	Filled the governance vacuum with extremist ideology. Exploits state weakness to tax businesses and recruit youth. Actively prevents reconstruction.
Diaspora Community	Somalia	Despite the chaos, Somali diaspora sends over USD 1.3B annually, providing social safety nets for millions. A critical actor in keeping communities alive.
AMISOM/AU Forces	Somalia	Provided security support enabling partial state reconstruction. Without external peacekeeping, Mogadishu would have remained permanently ungovernable.

4. Values That Underpinned National Transformation/Change

BOTSWANA's Foundational Values

Botho (Ubuntu): The Tswana concept of communal dignity — 'I am because we are'. This cultural value made social contracts strong.

Transparency & Accountability: From Seretse Khama's personal example downward, leaders were expected to be accountable for public resources.

Long-termism: Botswana as a country's leaders consistently chose long-term thinking — investing diamond revenues rather than distributing them as patronage.

Meritocracy: Public institutions were built on recruitment based on merit, reducing clan and ethnic favoritism in key sectors.

Democratic Continuity: Botswana as a country has held uninterrupted multi-party elections since 1965 — the longest democratic run in mainland Africa.

Clan over Country: The dominance of clan identity over national identity undermined the possibility of a social contract. Every government was seen as the enemy of the clans not in power.

Short-termism: Leaders extracted maximum wealth in minimum time, knowing the next coup could come at any moment.

Corruption as Survival: In the absence of institutions, corruption became a rational survival strategy — the only way to access resources.

"The most dangerous lie is not told by others — it is the one you whisper to yourself when no one is listening. It is the excuse you try to validate." Somalia's leaders told themselves their actions were necessary for national security. Botswana as a country's leaders told themselves the next generation deserved better.

5. Comparison with Kenya's National Transformation Journey

Kenya sits at a very important turning point. Like Botswana as a country in the 1970s, Kenya has discovered significant resources (oil in Turkana, rare earth minerals, a tech ecosystem). Like Somalia in the 1970s, Kenya faces worrying levels of inequality, youth unemployment, and the temptation to weaponize ethnic identity for political power. The choice between these two trajectories is being made right now by this generation — by this generation.

6. Kenya's Current Development Phase & The Five Pillars

Kenya's Current Phase: Transitioning from Foundation to Scale

Kenya’s development can be understood using four phases.

1. ***Survival Phase***

Countries stabilize their economy.
Kenya passed this phase after independence.

2. ***Foundation Phase***

Countries build infrastructure and institutions.

Kenya invested in:

Roads, schools, governance systems.

3. ***Scale Phase (Where Kenya mostly is now)***

Kenya today is now largely in the Scale Phase where it is:

Industrializing expanding exports supporting businesses. Examples:

manufacturing growth, digital economy, MSME support.

4. ***Global Relevance Phase (Future)***

At this stage countries influence global markets.

Kenya today is moving toward this stage through innovation and technology.

Using the four-phase transformation framework, Kenya today is best described as at the intersection of the Foundation Phase and the emerging Scale Phase — what we can call a 'Transition Phase'. The Foundation has been partially built (infrastructure: SGR, expressways, LAPSSET corridor; institutions: IEBC, EACC, NIS; universal primary education). However, Kenya has not yet achieved the industrialization and export consistency needed for the full-scale Phase.

Kenya's challenge: We have built some of the house but not yet moved in. The foundation exists but cracks in institutional integrity, budget absorption inefficiency (a key metric noted in today's session), and corruption risk weakening the entire structure.

Pillar 1: Agricultural Transformation

Agriculture employs over 40% of Kenya's workforce and contributes approximately 25% of GDP. Yet productivity remains chronically low relative to potential.

How it contributes: Coffee, tea, horticulture, and floriculture are Kenya's dominant agricultural export earners. Tea alone earns Kenya approximately KES 130 billion annually. The sector is the primary livelihood for rural Kenya, anchoring food security and rural poverty reduction.

Initiative 1 — Affordable Fertilizer Programme: The government subsidized fertilizer prices from KES 6,500/50kg to KES 2,500/50kg, benefiting over 5.4 million smallholder farmers. Maize production increased by approximately 25% in the 2023/24 season.

Initiative 2 — Galana-Kulalu Irrigation Scheme: The 1-million-acre food security project in Kilifi and Tana River counties. Despite implementation challenges, early phases have demonstrated the viability of large-scale irrigated maize and cotton farming in arid Kenya.

Initiative 3 — Digital Agriculture (DigiFarm by Safaricom): Over 1.2 million farmers access credit, inputs, and market linkages through the DigiFarm platform. This digitization of value chains is a Scale Phase indicator.

Development Phase Assessment: The Affordable Fertilizer Programme demonstrates Foundation Phase investment in enabling infrastructure. The Digi Farm platform signals Scale Phase readiness. Agricultural transformation is at the Foundation-to-Scale transition.

Pillar 2: MSME Economy

Kenya's MSME sector is the backbone of the economy — contributing approximately 33.8% of GDP and employing over 14.9 million people (Kenya National Bureau of Statistics, 2022).

Initiative 1 — Hustler Fund: Launched in November 2022, the Hustler Fund has disbursed over KES 50 billion to more than 22 million borrowers by 2024. While repayment rates remain a concern, financial inclusion is demonstrably expanding.

Initiative 2 — Kenya Youth Employment and Entrepreneurship Programme (KYEEP): Targeting 300,000 youth with business development services, mentorship, and seed capital. Linked to TVET institutions, creating industry-ready young entrepreneurs.

Initiative 3 — Nairobi International Financial Centre (NIFC): Established to position Kenya as a premier investment destination. The Centre has attracted regional HQs of global firms including Google (Africa HQ, Nairobi), Visa, and Mastercard.

Development Phase Assessment: MSMEs are a Scale Phase opportunity being supported by Foundation Phase tools. The Hustler Fund solves credit access; NIFC signals global relevance ambition.

Pillar 3: Healthcare

Healthcare is both a human development imperative and an economic productivity driver. Kenya's Universal Health Coverage (UHC) agenda under the Social Health Authority (SHA) is the centrepiece of current health policy.

Initiative 1 — Social Health Authority (SHA) / Taifa Care: Replacing NHIF, SHA aims to cover all 56 million Kenyans. Early implementation challenges (system migration, fraud prevention) are real, but the policy intent is transformational — mirroring Botswana as a country's MASA programme model.

Initiative 2 — Linda Mama Programme: Free maternity services for all women in public facilities. Reduced maternal mortality rates from 362 per 100,000 live births (2014) to approximately 290 (2022). Over 1 million births covered annually.

Initiative 3 — Community Health Promoters (CHPs): 100,000 CHPs deployed nationwide, each covering approximately 100 households. First-level preventive care at community level — a classic Foundation Phase investment in human capital.

Development Phase Assessment: Healthcare sits firmly in the Foundation Phase — investing in human capital for long-term productivity. SHA, if successfully implemented, could be Kenya's equivalent of Botswana as a country's MASA breakthrough.

Pillar 4: Housing and Settlement

Kenya faces an annual housing deficit of approximately 200,000 units, concentrated in urban areas. Nairobi alone has over 2.5 million people living in informal settlements.

Initiative 1 — Affordable Housing Programme (AHP): Targeting 250,000 housing units per year. Units priced from KES 800,000 for studio apartments. The Pangani, Park Road, and Shauri Moyo projects are in active construction. Over 200,000 Kenyans have registered interest.

Initiative 2 — Kenya Mortgage Refinance Company (KMRC): Provides long-term liquidity to mortgage lenders, enabling 25-year mortgages at rates as low as 9.5% per annum. Over KES 6 billion disbursed to partner financial institutions by 2024.

Initiative 3 — Boma Yangu Portal: Digital platform connecting citizens to AHP units. Democratizes access to affordable housing information and registration — a Scale Phase digital delivery mechanism.

Development Phase Assessment: Housing is a Foundation Phase investment with Scale Phase aspirations. The Affordable Housing Programme signals government ambition to industrialize construction — creating jobs, attracting investment, and addressing urban inequality simultaneously.

Pillar 5: Digital Superhighway and Creative Industry

Kenya's digital economy is arguably its most globally recognized competitive advantage. From M-Pesa to Nairobi's 'Silicon Savannah', the country punches well above its weight in digital innovation.

Initiative 1 — Konza Technopolis: Africa's Silicon Valley. Over KES 64 billion invested in infrastructure. Phase 1 includes a Data Centre, Smart City backbone, and Research & Innovation Hub. The National ICT Innovation Hub is operational.

Initiative 2 — National Optic Fibre Backbone (NOFBI) and Last Mile Connectivity: Kenya has over 100,000 km of fibre optic cable. Government's 'Digital Superhighway' initiative targets connecting every school, health facility, and government office. Over 1,450 hotspots installed in public spaces.

Initiative 3 — Creative Economy (Film, Music, Design): Kenya's creative sector contributes approximately KES 300 billion to GDP (UNCTAD estimates). The Nairobi Film Festival, East Africa's growing TV production industry (streaming platforms including Netflix's Kenyan originals), and a vibrant music export industry (Gengetone, Afro-pop) position Kenya for Global Relevance Phase in the creative economy.

Development Phase Assessment: Digital and Creative sectors are Kenya's leading edge — already touching Scale Phase and in some areas (fintech, mobile money) demonstrating Global Relevance Phase characteristics. M-Pesa is used in 45+ countries. This is Kenya's Botswana as a country diamond moment.

7. Core Lessons for a Generation Desirous of Driving Change

Institutions outlast individuals — Seretse Khama's greatest legacy was not what he built but the systems he put in place to survive him. Build institutions, not fiefdoms.

The resource curse is optional — Botswana as a country proves that natural resources need not corrupt. The choice lies in the values of leaders at the moment of discovery.

Glocal Mindset — Think globally, act locally. Botswana as a country tapped De Beers' global expertise while retaining national ownership. Kenya's Gen Z must master global standards while staying rooted in local realities.

Anticipatory leadership — Act before the crisis, not after. Botswana as a country's HIV/AIDS response was proactive, not reactive. What are Kenya's coming crises, and are we preparing now?

Patience compounds — Transformation is generational. Botswana as a country's leaders planted trees under whose shade they would never sit. Gen Z must think in decades, not election cycles.

8. The Uncomfortable Truth — The Elephant in the Room

"If you cannot see your own flaws clearly, someone else will explain them to you. Your blind spots become their weapon. Your denial becomes their opportunity. Your self-deception becomes their strategy."

Kenya's cultural and mindset elephants in the room include:

Ethnicity as Identity: We have not yet developed a Kenyan identity that supersedes ethnic identity. Politicians exploit this every five years, and we allow it. Somalia's collapse began with clan loyalty superseding national loyalty.

Corruption Tolerance: We celebrate the wealthy without asking how the wealth was accumulated. We condemn corruption in others but rationalize it in those from our community. This selective morality is corrosive.

Victim Mentality vs. Agency: We are quick to blame colonialism, tribalism, and 'the system' while refusing to interrogate our own choices. : "Selfdeception is the first step toward defeat."

The Dependency Syndrome: Kenya still operates systems designed for foreign approval — from NGO culture to aid dependency. True transformation requires designing solutions for Kenyan problems with Kenyan agency.

Anti-intellectualism: We mock 'too much education' in public discourse. Kenya celebrates connected mediocrity over meritocratic excellence. This is the opposite of the Botswana as a country model.

9. Gen Z's Contribution to the Current State of Kenya

Intellectual honesty demands that we look in the mirror before looking out the window. Gen Z's fingerprints are on Kenya's current state — for better and worse:

For better — The June/July 2024 Finance Bill protests demonstrated that Gen Z can organize, articulate policy demands, and force accountability in ways no previous generation achieved at scale. The protests led to the withdrawal of the Finance Bill. This is agency.

For better — Digital content creation, fintech adoption, and startup founding are overwhelmingly driven by Kenyans under 35. Nairobi's innovation ecosystem is a Gen Z ecosystem.

For worse — Voter apathy and selective civic engagement. Gen Z mobilized brilliantly for protests but voter registration and turnout among young people remains disappointingly low. You cannot protest the leaders you did not vote against.

For worse — Online echo chambers and tribalized digital spaces. Gen Z social media amplifies ethnic narratives as powerfully as it amplifies progressive ones. The same tools that organized the protests are used daily for ethnic incitement.

For worse — 'Hustler' culture without values clarity. The celebration of quick wealth — regardless of source — reflects a values deficit that creates conditions for corruption in the next generation of leaders.

10. Top Three Systemic Changes Kenya Must Prioritize

1. **Institutional Reform & Anti-Corruption Architecture**

Kenya needs an independent, well-funded, prosecutorial DCEC equivalent — a Directorate of Anti-Corruption with teeth, modelled on Botswana as a country's DCEC or Singapore's CPIB. The EACC currently lacks prosecutorial independence. This single change would unlock investment, improve service delivery, and restore public trust in government.

2. **Education Transformation — From Certificates to Competencies**

Kenya's CBC curriculum reform is necessary but insufficient without transforming the quality of teachers, availability of learning materials, and relevance of curriculum to the labour market. We need to invest in TVET at the same status level as university education. Botswana as a country built human capital before it knew diamonds would fund it. Kenya must do the same.

3. **Land Reforms and Spatial Justice**

Land is Kenya's original sin and its enduring wound. Historical inequities in land ownership underpin poverty, ethnic conflict, and displacement. A comprehensive, politically courageous land reform that addresses historical injustice while creating productive land use frameworks is non-negotiable for transformative development. Somalia's warlordism was, in part, a contest over territorial control. Kenya's land politics mirror this — at a lower intensity — today.

11. Top Three Leadership Behaviours Gen Z Must Adopt

1. **Brutal Self-Honesty**

'Brutal self-honesty is the foundation of power, clarity and control.' Gen Z leaders must be willing to interrogate their own biases, privileges, and limitations before presuming to lead others. This is the 'Pathemata Mathemata' principle — we learn through suffering, through honest confrontation with our failures.

2. **Interdependence over Independence**

'Life was made for us to be interdependent.' Gen Z must embrace collaborative leadership — Mastermind Alliances, reverse mentorship, intergenerational dialogue. The lone saviour model of leadership is exactly what destroyed Somalia. Botswana as a country's model was collective, with clear accountability.

3. **Anticipatory Action — Blue Ocean Thinking**

The Blue Ocean Leadership concept covered in today's session is critical: stop competing in the existing red ocean of politics, patronage and corruption — create new spaces of value creation. Gen Z leaders must be future-oriented, scanning the horizon for emerging opportunities and threats and positioning Kenya strategically before the wave arrives.

12. Immediate Practical Actions for Gen Z Leaders

Community Level	Establish peer accountability circles / Mastermind groups at ward level to monitor devolved resource utilization and report misappropriation	Community-level accountability is the foundation of national integrity. Horizontal trust builds upward.
Institutional Level	Champion merit-based recruitment within your own institutions — refuse to hire or recommend on ethnic grounds; publicly commit to skillsbased selection	"Talent without an opportunity of expression will not succeed." Create the opportunity structures within institutions you already control.
Policy Level	Engage actively with the County Integrated Development Plans (CIDPs) and National Development Plan submissions — present evidencebased alternative policy positions using the DMEAL framework (Design, Monitoring, Evaluation, Adaptive Learning)	Policy is not made by the loudest voice but by the most credible voice. Gen Z must speak the language of evidence, not just protest.

TRANSFORMATIONAL LEADERSHIP CONVERSATIONS

13. Ten Innovative Programmes Advancing Kenya's Transformation

#	Programme/Intervention	Sector	Evidence-Based Impact
1	M-Pesa (Safaricom)	Digital Finance	Over 30 million active users; USD 316 billion in transactions (2023); present in 7 countries; proven to reduce poverty and increase financial resilience for women.
2	Affordable Housing Programme	Housing	200,000+ registrations; active construction sites in Nairobi; construction sector employment increased 8% in 2023.
3	Social Health Authority (SHA/Taifa Care)	Healthcare	Targeting 56M Kenyans; replacing fragmented NHIF coverage; policy
#	Programme/Intervention	Sector	Evidence-Based Impact
			alignment with Botswana MASA model of universal access.
4	Affordable Fertilizer Programme	Agriculture	Fertilizer price reduced by 62%; benefited 5.4M farmers; 25% increase in maize production (2023/24).
5	Hustler Fund	MSME/Finance	KES 50B+ disbursed; 22M+ borrowers; highest mobile loan penetration in Africa.
6	Konza Technopolis	Digital/ICT	KES 64B invested; operational Data Centre; attracting tech HQs regionally.
7	Community Health Promoters	Healthcare	100,000 CHPs deployed; preventive care reaching 10M+ households.
8	Kenya Mortgage Refinance Company	Housing	KES 6B+ disbursed; 9.5% mortgage rates enabled; expanding formal homeownership.
9	DigiFarm (Safaricom Agriculture)	Agriculture/Digital	1.2M farmers on platform; credit, input, and market access integrated.
10	National Optic Fibre Backbone (NOFBI)	Digital Infrastructure	100,000+ km fibre; 1,450+ public hotspots; enabling digital public service delivery.

14. Lessons Kenya Can Realistically Adopt or Avoid

ADOPT from Botswana as a country

Sovereign Wealth Fund: Kenya must establish a genuine sovereign wealth fund for oil and mineral revenues — not budget supplements but intergenerational wealth.

Independent Anti-Corruption Architecture: Model the DCEC — give Kenya's anti-corruption body prosecutorial independence and ring-fenced funding.

Meritocratic Public Service: Competitive, transparent public service hiring. The principle that 'correctness' (skills, evidence, expertise) must supersede 'honesty to one's community' in public appointments.

Long-term National Planning: Botswana as a country's Vision 2036 is its fourth long-term national plan. Kenya's Vision 2030 needs to survive political transitions — institutionalize it beyond the Presidency.

AVOIDS from Somalia

Instrumentalizing Ethnicity: Any political movement that builds power through ethnic grievance is on the Somalia trajectory. This must be called out at every level.

Allowing Institutional Decay: The moment we stop defending independent institutions — judiciary, IEBC, EACC, media — we begin the slide. Somalia's institutions were dismantled one coup at a time.

Militarizing Political Disagreement: The June 2024 protests showed that democratic protest is possible. But also showed how quickly the state can respond with lethal force. The line between legitimate security and political suppression must be defended constitutionally.

The Patronage Trap: Government appointments must not be reward systems for political loyalty. Botswana as a country succeeded because appointments were on merit. Somalia failed because they were on clan loyalty. Kenya must choose.

15. If Kenya Fails — What Part Belongs to Us?

"Your competitors want you comfortable because comfortable people do not fight. Discomfort requires energy, focus and risk."

If Kenya fails — especially after the President has pronounced himself on a First World mindset and transition — the failure will not belong solely to politicians. A significant portion will belong to this generation of young leaders who:

Knew what was wrong and chose silence over confrontation — comfort over courage.

Had access to knowledge, connectivity, and platforms — and used them primarily for entertainment rather than transformation.

Understood the DMEAL framework, Blue Ocean thinking, and transformational leadership principles — and left them in notebooks rather than embedding them in institutions.

Watched corruption happen in their own circles — in university student elections, in community project procurement, in workplace nepotism — and rationalized it as 'the way things work.'

Waited for a leader to emerge rather than becoming the leader the moment required.

However, failure is not inevitable. The same generation that protested the Finance Bill in 2024 — without a central leader, using decentralized digital organization, with clear policy demands — proved that agency is available to us. The question is whether we convert protest energy into governance participation.

"We grew up knowing leadership is a route to 'having'. The transformation begins when we understand leadership is a route to 'being' and 'doing.'"

Botswana as a country chose to be the exception when everyone expected it to be another African tragedy. Somalia proved that nations with tremendous potential can destroy themselves from within. Kenya has everything it needs — the resources, the talent, the coastline, the technology ecosystem, the youth demographic.

The only question is: What will WE choose to do with it?

END!
